

PRODUCT REQUIREMENTS DOCUMENT

Member Intelligence & Relationship Management Platform

Project Name	[Project Name]
Client	GTMSHift / SolutionsExec
Version	v1.0
Status	[Draft In Review Approved]
Author(s)	[Author Name(s)]
Date	[MM/DD/YYYY]
Last Updated	[MM/DD/YYYY]

C O N F I D E N T I A L

1. Overview

1.1 Executive Summary

Provide a 2–3 sentence description of the product, its purpose, and the core problem it solves.
[Insert executive summary here. Describe the platform at a high level — what it does, who it serves, and why it matters.]

1.2 Problem Statement

Describe the specific pain point or gap this product addresses.
[Describe the problem here. Be specific about the current limitations, manual processes, or missed opportunities the client faces without this system.]

1.3 Proposed Solution

Describe how the product solves the problem. This is the product's value proposition.
[Describe the solution here — a member intelligence and relationship management platform that ingests data from multiple sources, builds dynamic member profiles, and provides the client with actionable insights on their network.]

1.4 Goals & Success Metrics

List the primary goals and how success will be measured.

Goal	Success Metric	Target
Centralized member data	All member records in one system	100% of active members
Automated enrichment	% of profiles auto-enriched	>70% within 30 days
Interaction tracking	Interactions logged per month	[Set target]
Search & retrieval speed	Time to find a member profile	< 2 seconds
[Add goal]	[Add metric]	[Add target]

2. Stakeholders & Users

2.1 Stakeholder Map

Role	Name/Team	Responsibility	Approval Required?
Client / Owner	GTMSHift / SolutionsExec	Primary user, defines workflow	Yes
Internal Ops Team	[Team Name]	Data entry, member management	No
Development Team	[Agency / Team]	Build and maintain platform	No
[Add stakeholder]			

2.2 User Personas

Persona 1 – The Client (Platform Owner)

Name / Role	<i>GTMSHift Client / Business Owner</i>
Primary Goal	<i>Quickly review and act on member profiles; stay informed about his network</i>
Key Tasks	<i>Search members, view interaction history, see enrichment data, add notes</i>
Pain Points	<i>Data scattered across email, LinkedIn, notes; no single source of truth</i>
Success Looks Like	<i>Opens platform and sees a complete, current profile within seconds</i>

Persona 2 – Internal Ops Team

Name / Role	<i>Internal Team Member / Data Administrator</i>
Primary Goal	<i>Efficiently enter, update, and manage member records</i>
Key Tasks	<i>Create profiles, log interactions, resolve duplicates, trigger enrichment</i>
Pain Points	<i>Manual data entry is time-consuming; no structured process for updates</i>
Success Looks Like	<i>Fast data entry workflow; alerts for missing or stale fields</i>

3. Scope

3.1 In Scope

- Dynamic member profile system with flexible schema (no preset column limits)
- Three data ingestion paths: public web form, manual team entry, automated enrichment
- Interaction/timeline tracking (meetings, messages, calls, events, notes)
- Full-text and filtered search across all member data
- Role-based access: client dashboard view vs. internal admin view
- Automated enrichment pipeline (LinkedIn, company websites, public sources)

- Deduplication and conflict resolution between data sources
- Analytics and reporting for client dashboard
- [Add additional in-scope item]

3.2 Out of Scope

- Member-facing access (members cannot view or edit their own profiles)
- CRM integrations with third-party tools (Phase 2)
- Mobile native app (web-responsive only in this phase)
- Payment or billing functionality
- [Add additional out-of-scope item]

3.3 Assumptions & Constraints

Assumptions	Constraints
Client has access to member data for initial import	LinkedIn automated scraping carries legal/TOS risk — must be scoped carefully
Internal team will manage daily data entry in Phase 1	No pre-existing database or API to integrate with at launch
Client workflow will stabilize before automated enrichment is built	Budget and timeline TBD — subject to discovery output
[Add assumption]	[Add constraint]

4. Functional Requirements

4.1 Member Profile Management

Core Requirement

- Profiles must support arbitrary key-value data — no hardcoded schema
- Every piece of information (school, company, role, interests, etc.) must be storable
- Profile data accumulates over time across multiple interactions

ID	Requirement	Priority	Status	Notes
F-01	Create, read, update, delete (CRUD) member profiles	Must Have	[] Open	
F-02	Store flexible/dynamic attributes via JSONB or equivalent	Must Have	[] Open	No column limits

ID	Requirement	Priority	Status	Notes
F-03	Support file/media attachments (photos, docs) per profile	Should Have	[] Open	
F-04	Profile version history / audit trail	Should Have	[] Open	
F-05	Merge duplicate member profiles with conflict resolution	Must Have	[] Open	See §4.5
[F-0X]	[Add requirement]	[Priority]	[] Open	

4.2 Data Ingestion

ID	Requirement	Priority	Status	Notes
F-10	Public web form for self-submitted member info	Must Have	[] Open	
F-11	Manual entry interface for internal team	Must Have	[] Open	
F-12	Automated enrichment from LinkedIn (public data)	Must Have	[] Open	High legal/TOS risk
F-13	Automated enrichment from company websites	Should Have	[] Open	
F-14	Bulk CSV import for existing member data	Should Have	[] Open	
F-15	Configurable enrichment trigger (manual vs. scheduled)	Should Have	[] Open	
[F-1X]	[Add requirement]	[Priority]	[] Open	

4.3 Interaction & Timeline Tracking

ID	Requirement	Priority	Status	Notes
F-20	Log interactions: meetings, calls, messages, events, notes	Must Have	[] Open	
F-21	Timeline view per member profile	Must Have	[] Open	
F-22	Manual interaction entry by internal team	Must Have	[] Open	
F-23	Calendar platform sync for automatic interaction logging	Should Have	[] Open	Platform TBD

ID	Requirement	Priority	Status	Notes
F-24	Tag/categorize interactions by type and topic	Nice to Have	[] Open	
[F-2X]	[Add requirement]	[Priority]	[] Open	

4.4 Search & Discovery

ID	Requirement	Priority	Status	Notes
F-30	Full-text search across all member profile fields	Must Have	[] Open	Typesense or Elasticsearch
F-31	Filter by attributes (company, role, location, tags, etc.)	Must Have	[] Open	
F-32	Search results returned in < 2 seconds	Must Have	[] Open	Performance SLA
F-33	Save and re-run searches / segments	Nice to Have	[] Open	
[F-3X]	[Add requirement]	[Priority]	[] Open	

4.5 Deduplication & Data Quality

Critical Open Question

- Deduplication logic is underspecified — must be resolved before build begins
- What fields are used to detect duplicates? (email, name+company, phone?)
- Auto-merge vs. flag-for-review vs. manual-only merge — which is correct?
- How are conflicts resolved when two sources disagree on the same field?

ID	Requirement	Priority	Status	Notes
F-40	Detect potential duplicate records on creation/import	Must Have	[] Open	Logic TBD
F-41	Conflict resolution rules when sources disagree	Must Have	[] Open	Logic TBD
F-42	Manual merge interface for reviewed duplicates	Must Have	[] Open	
F-43	Data quality score or completeness indicator per profile	Nice to Have	[] Open	
[F-4X]	[Add requirement]	[Priority]	[] Open	

4.6 Access Control & Roles

Role	Permissions	Restrictions
Client / Owner	Read all profiles, view analytics, read-only dashboard	Cannot edit raw data; no admin controls
Internal Ops Team	Full CRUD on profiles, log interactions, trigger enrichment	Cannot change system config or user roles
System Admin	All permissions including user management, system config	Restricted to trusted internal personnel
[Add role]		

5. Non-Functional Requirements

Category	Requirement	Target
Performance	Search results returned within target SLA	< 2 sec
Scalability	Support growing member database over time	[X]K members
Availability	Platform uptime	>99.5% uptime
Security	Data encrypted at rest and in transit	TLS 1.2+, AES-256
Privacy / Compliance	Compliance with applicable data privacy regulations	GDPR / CCPA as applicable
Auditability	Log of all data changes with timestamp and user	Full audit trail
Usability	Client dashboard usable without training	Validated in client testing
[Add NFR]		

6. Data Architecture

6.1 Technology Decisions

Layer	Technology	Rationale
Primary Database	PostgreSQL + JSONB	Flexible schema for dynamic member attributes
Search Index	Typesense or Elasticsearch	Fast full-text search across all fields
File/Media Storage	Blob storage (S3-compatible)	Profile photos, documents, attachments
API Layer	REST API	Interface for all integrations and front-end
Auth	Role-based (JWT or equivalent)	Distinct client vs. internal team access
Calendar Sync	TBD — client's preferred platform	Automatic interaction logging

6.2 Data Ingestion Paths

- Path 1 – Public Web Form: member submits their own data via form; data mapped to profile schema
- Path 2 – Manual Team Entry: internal ops team enters or updates profile data directly in the platform
- Path 3 – Automated Enrichment: system queries LinkedIn, company websites, and other public sources; results merged into profile per conflict resolution rules
- Path 4 – Bulk Import: CSV or similar format for historical data migration

6.3 Open Data Questions

Must Resolve Before Build

- What fields trigger deduplication matching? (email primary? name+company fallback?)
- Which source 'wins' when LinkedIn and manual entry disagree on job title?
- What is the data retention policy — how long are inactive profiles kept?
- Are there compliance requirements (GDPR, CCPA) that restrict enrichment?
- What calendar platform does the client use for interaction sync?

7. Project Timeline

Week(s)	Phase	Key Deliverables	Risk Level
1	Discovery & Planning	PRD finalized, open questions resolved, tech stack confirmed	Low

Week(s)	Phase	Key Deliverables	Risk Level
2	Detailed Design	Data model, API contracts, UI wireframes	Low
3–4	Core Build	Auth, profile CRUD, manual entry, basic search	Medium
5	Interaction Timeline	Interaction logging, timeline view, calendar sync (if ready)	Medium
6	Analytics & Enrichment Prep	Client dashboard analytics, enrichment pipeline design	High
7	Client Testing	UAT with client — DO NOT compress this phase	High
8	Deployment & Handoff	Production deploy, documentation, training	Medium

Timeline Risk Flags

- Automated enrichment (Week 6) is highest-risk — legal/technical complexity; plan conservatively
- Client testing (Week 7) must be protected — compressing this is a known failure mode given how tightly the tool fits the client's personal workflow
- Deduplication and conflict resolution logic must be locked before Week 3 build begins

8. Risks & Mitigations

Risk	Likelihood	Impact	Mitigation
LinkedIn scraping violates TOS or triggers blocks	High	High	Legal review; use only public data; consider official APIs or manual enrichment fallback
Deduplication logic not resolved before build	Medium	High	Require sign-off on dedup spec before Week 3
Client testing compressed under deadline pressure	High	Medium	Build protected time in contract; schedule testing early
Scope creep from client mid-build	Medium	Medium	Change request process; weekly check-ins
Calendar sync platform not selected in time	Medium	Low	Build sync as modular; launch without it if needed
[Add risk]			

9. Open Questions & Decisions Required

#	Question	Owner	Due	Status
1	What fields trigger duplicate detection?	[Name]	[Date]	Open
2	Which source wins in conflict resolution?	[Name]	[Date]	Open
3	What calendar platform does the client use?	[Name]	[Date]	Open
4	Are there GDPR/CCPA obligations to consider?	[Name]	[Date]	Open
5	What is the initial member count for data migration?	[Name]	[Date]	Open
6	What analytics/reporting does the client want on their dashboard?	[Name]	[Date]	Open
[X]	[Add question]			Open

10. Approvals

Name	Role	Signature	Date
	Client / Owner		
	Project Lead		
	Tech Lead		
[Add approver]			

Document Change Log

Version	Date	Author	Summary of Changes
v1.0	[Date]	[Author]	Initial draft
v1.1
